

Spam Emails

2024-02-16 - Aimee Judkins - Comments (0) - General News

We have recently discovered that once again, several of our schools are being targeted by unwanted phishing emails. Unfortunately, completely eliminating spam is not possible. The continuous evolution of spam tactics enables it to circumvent filters, regardless of their strength. It is essential to remain vigilant and cautious.

The current emails targeting schools contain a PDF document with the subject 'Confidential Document...' or similar. Clicking on it can compromise your email account, leading to the sending of more similar emails to your contacts, exacerbating the issue.

If you receive an email that seems suspicious, refrain from opening it and delete it promptly. Additionally, if you suspect your account has been compromised, change your password and notify us immediately.
